Apopka · tract 12095017703

SNAP enrollment gap

Likely Under-enrolled

Expected	**35.5%**
Actual · 90% MOE	**21.5% ±7.5 pp**
Gap · actual − expected	**-14.0 pp**

Five-fold held-out ridge estimate. Gap = actual − expected; negative means below expected.

Outreach hypothesis only: shortfall exceeds SNAP MOE plus held-out model-error allowance.

Top model associations

- Poverty rate: 14.2 pp higher expected participation versus the training-fold average (association, not cause).
- Median household income (log scale): 7.5 pp higher expected participation versus the training-fold average (association, not cause).
- Unemployment rate: 0.7 pp lower expected participation versus the training-fold average (association, not cause).

How the label is assigned

Shortfall must exceed SNAP MOE plus 5.5 pp model-error allowance; SNAP MOE <10 pp and relative CV ≤0.30. This is a screening rule, not a probability or confidence interval.

Missing predictors or unstable SNAP estimates force uncertainty. Predictor MOEs are not propagated; random-fold validation may be optimistic for neighboring tracts.

> Expected participation among all households, not eligibility, food need or proven under-enrollment. ACS 01/2020–12/2024; associations, not causes. Verify locally.
